FOR IMMEDIATE RELEASE

**4POINT SELECTED BY ADOBE TO HELP CUSTOMERS
MIGRATE TO LIVECYCLE ES**

**Adobe Central Output Server Migration Guide to be a key enabler
in supporting customers through their migration planning**

OTTAWA, Ontario, CANADA — August 6, 2007 — Four Point Solutions Ltd. (4Point), a leading Adobe® LiveCycle® Solution Partner, announced today the availability of the Adobe Central Output Server Migration Guide targeting enterprise customers currently using Central® or Central PRO for their high-fidelity document output requirements. The migration guide addresses the diverse needs of these customers by providing detailed and insightful information on various migration scenarios to Adobe LiveCycle Output ES, highlighting potential issues, recommended approaches and best practices.

LiveCycle Output ES is a solution component in the recently released LiveCycle Enterprise Suite (ES). It enables organizations to dynamically generate, assemble, and deliver personalized documents in print or electronic formats such as contracts, welcome packages, quotations, or shipping labels. Adobe's existing document generation product line, the Adobe Central Output Server family will continue to be sold and supported. Central Output Server customers who wish to take advantage of the Adobe LiveCycle platform are eligible to trade-up to LiveCycle Output ES.

Adobe LiveCycle ES presents enterprise customers with a unique opportunity to leverage a single standards-based service-oriented architecture to deliver rich and engaging applications that can help streamline and extend traditional paper-based processes beyond the boundaries of the enterprise. Customers can benefit from a functionally scalable J2EE server solution to compliment Central or provide a cost effective way to ensure more positive and productive online experiences resulting in greater customer satisfaction, faster cycle times and lower abandonment rates.

The Central Output Server family of products has been a cornerstone offering in the marketplace for years, by providing organizations with the document generation capabilities needed to produce high-quality, high-fidelity documents from legacy system data. Whether customers decide to migrate to LiveCycle Output ES now or continue to leverage their existing technology investment in Central, there is significant value in introducing the LiveCycle platform as part of their technology infrastructure. A number of customers today use LiveCycle to compliment Central by automating processes, assembling PDFs or securely delivering documents to intended recipients.

“With the release of LiveCycle Output ES, having a detailed migration guide available to us along with the support of 4Point, a leading Adobe Solution Partner, provides our company with the level of comfort we need in evaluating and defining our Central Output migration plans,” said Karl Flower, Director of Application Technology, RLI Corp, a specialty insurance company, offering a diversified portfolio of property and casualty coverages and surety bonds serving "niche" or underserved markets. “We rely on Adobe Central PRO today to produce legally compliant documents for our customers. We must now look towards an integrated service-oriented architecture solution that extends beyond document generation to build end-to-end processes that include interactive forms, process management, document security, and more. Given our experience with 4Point and Adobe to date, the logical avenue for us to consider is obviously LiveCycle ES.”

“Partners are critical to extending Adobe’s reach within the enterprise and developing a partner ecosystem with the objective of building lasting relationships with engaged customers is a major business mandate for us,” said Jeff Whatcott, vice president of Business Productivity Business Unit at Adobe. “4Point is a valued partner and brings a high level of experience and expertise that will not only benefit our joint Central customers but also contribute to the success of LiveCycle ES.”

4Point remains committed to providing existing Central Output Server customers with the help and support they need to meet their existing and future business needs. This is one of the key drivers in making this migration guide available to customers.
