Believe: One Invoice Can Change Your World

A cost-effective way to begin (what can be) the complex business of eInvoicing is to simplify: start small—with one department or one country or region. Then sit back. Get comfortable. Demonstrate its value. See a return on investment. Then move on to the next one. As long as you've chosen a scalable system as your starting point that will grow as you grow and meet your long-term needs, you're good to go.

Built on Adobe Enterprise Technology

The 4Point eInvoice QuickStart puts you squarely on the path to a complete eInvoice solution. Built on Adobe enterprise technology, only the 4Point eInvoice QuickStart allows you to start small and then add on, until you've achieved a total eInvoicing solution—one that is fully integrated with your existing system, manages complex data flows, and allows for digital signing, archival, secure delivery, and more.

eInvoice QuickStart

The 4Point eInvoice QuickStart functionality includes the generation of one electronic invoice template based on an XML data stream dropped into a watched folder for processing, and the subsequent delivery of that eInvoice via fax, e-mail, or printing to centralized printers. It's this simple:

1. Prepare Your Data - Data is delivered from back end systems, such as order handling, shipping, or billing and matches the requirements of the eInvoice form template.
2. Create The Invoice - The data is then generated into a pre-designed custom eInvoice template. Adobe® LiveCycle® Output ES is used to merge the XML data with the intelligent PDF template.
3. Send Your Invoice - All invoices generated via the data stream and merged with the intelligent PDF template are either sent directly to the buyer via e-mail or fax, or are printed locally for postal delivery.
4. Error Handling - Any error conditions will be placed in the Error Handler Folder for action.

The core package is fully scalable and can be expanded via pre-packaged modules or customizable options to incorporate process improvements and additional functionality.

Find Your Inner ROI

Going Paperless Has Its (Many) Rewards...

Paper requires trees and people—to produce it and to push it around. So going paperless is not just good for the environment, it's good for the bottom line. The biggest reason why companies haven't jumped in with both feet is that paperless technology also costs money, particularly for complex projects requiring the integration of disparate systems. Many are now turning to a pain-free solution: break it down into manageable chunks with defined costs and then finish them off, one chunk at a time.

What You Get:

- One (1) pre-designed custom eInvoice template
- eInvoice Generation - based on XML data stream and intelligent PDF
- eInvoice Delivery - including e-mail, fax, and print
- One (1) license of Adobe LiveCycle Output ES*

Need to Digitally Sign Your eInvoice?

You can. Simply add the eInvoice QuickStart Digital Signature Module. It has everything you need to start signing your eInvoice right away, including:

- One (1) Adobe LiveCycle Digital Signatures ES license*
- A SafeNet® PCI 3000 HSM
- GlobalSign®'s DocumentSign Certified Document Service (CDS) certificate authority and time-stamping services, with your choice of two signing volume options:
 - Option 1: 25,000 annual signings
 - Option 2: 100,000 annual signings

Archiving Made Easy

The standalone Archival Module includes the license for Adobe LiveCycle Content Services ES.* Or ask about our systems integration services which can leverage your existing content repository.

Need More Than One Invoice Template?

Extend the QuickStart core package with two additional pre-designed custom eInvoice templates and test eInvoicing in different countries or for different customers for a pre-defined cost.

eInvoice: As You Like It

If we don't have the module you need pre-packaged, don't worry. We don't stop there.

We're a full consultancy shop, actually the largest Adobe LiveCycle consultancy in the world, with a full complement of solution architects and system integrators with global experience delivering eInvoice solutions. We will work with you to ensure that your eInvoice solution works for you.
