PDF GENERATOR SPECIALIST WORKSHOP FOR AEM FORMS/LC ES4

Summary

This workshop focuses on building LiveCycle applications using the PDF Generator module. This workshop consists of lectures and demonstrations combined with a series of exercises that focus on PDF Generator and introduce Assembler. The result is the creation of a PDF generation and archive solution. Topics covered include creating PDF from multiple file types, an introduction to creating DDX files and using Assembler to generate PDF and PDF portfolios based on multiple document inputs. The workshop uses Adobe LiveCycle Workbench ES4, which is the integrated development environment (IDE) for creating LiveCycle applications. The learner will develop a PDF generation and archive solution to the extent that:

- Workbench is used in a lab setting
- Multiple document inputs are handled
- PDF Generator is used to generate a PDF Portfolio and a PDF/A document for archive
- Functionality is achieved as per lab requirements

Outline

- I. Introduction to LiveCycle PDF Generator ES4
- II. Handling Multiple Files with PDF Generator
- III. Using Document Builder to Create DDX Files
- IV. Creating Archival PDFs
