

RESULTS

+ 2,000 hours of data entry saved in first month of solution integration.

Paper “look-and-feel” with mobile freedom.

50% reduction in form completion time.

Seamless integration with existing IT infrastructure.

Enhanced community policing operations with mobile data capture.

With 4Point’s expertise, the speed of development was fast, which was a definite plus. As a result, we were able to swiftly respond to market demand.

CHRIS HELLEWELL,
SENIOR VP, RESEARCH & DEVELOPMENT
SPILLMAN

About

Since 1983, Spillman has been a leader in providing software used by public safety agencies across the United States. With over 30 modules, their solutions encompass the most critical aspects of public safety operations.

In a rapidly evolving field, Spillman’s focus has always been to stay atop technological trends that impact cost-savings and enhance public safety for their customers.

Challenge

Spillman was looking to find an e-form solution that would give better mobility and interactivity to it’s policing clients. Their key need was a responsive technology that would allow police officers to perform data entry in the field, from the convenience of their car, instead of having to wait until their return to the office.

Finding an engaging solution that would integrate with Spillman’s existing investments in technology was critical. Among other major challenges, it was imperative that the various state requirements for electronic documentation were met.

Solution

Leveraging Adobe Experience Manager Forms (formerly Adobe LiveCycle) technology, 4Point helped Spillman create an efficient e-form solution, significantly improving mobile operations and police-community engagement.

The new mobile, interactive forms leverage the touch screen devices that operate out of the police vehicles. The rich and flexible user-interface reduces time spent by officers on data entry and increases the time allocated to ensuring public safety.
