Adobe LiveCycle

Strong Professional Services Team

Experience with wide range of projects, from turnkey installations, to strategic business analysis and custom solution implementation.

FORM DEVELOPMENT

Overview

With digital processes and workflows becoming the norm, manual, paper-based interactions are quickly becoming inadequate. Many organizations with a high dependency on form-driven communication are turning to digital form development to offer a better user experience to their clients, and improve process efficiencies and productivity for their employees.

E-Form Expertise - 'The Forms Experts'

You can rely on the 12+ years of e-form experience held by the 4Point Professional Services team to ensure the highest quality in forms development. The 4Point team takes on a variety of forms development, conversion, and migration projects; ranging from simple to complex. The highest level of attention is applied to planning, form layout and design, form development, testing and reporting.

North American-Based

4Point offers Forms Development services as a local (North American based) solution to achieve high capacity, high quality form maintenance, and form migration.

Forms On-Demand

4Point has a dedicated Forms Development team that can provide completed forms rapidly-on-demand. We can address your priority deliverables with quality results you can count on.

Mobility

Create or convert forms to dynamically respond to the varying screen sizes of multiple tablet and phone devices. Move forms applications from the desktop to address process improvement and responsiveness by leveraging mobile devices.

Accessibility

Address web content accessibility guidelines (WCAG) and e-form requirements such as the U.S. Government Section 508 accessibility standards. The 4Point developers are well-versed on the topic - 4Point has developed thousands of accessibility compliant forms.

Security

In an age of digital communication, information security is paramount. 4Point can encrypt PII (Personally Identifiable information) and ensure that security requirements are met, including HIPAA (Health Insurance Portability and Accountability Act), while implementing secure policies for tracking and delivery.

Document Conversion

With vast experience in structured data and document formats, 4Point Developers leverage best practices cultivated over more than a decade of experience to convert legacy documents and optimize information collection and management. 4Point uses its proprietary e-forms conversion software to reduce conversion time while ensuring high quality results.

Examples of document formation conversion includes:

- PDF to HTML5
- Lotus Forms and IBM PureEdge Forms to AEM Forms
- OmniForm, FormFlow and InForms to AEM Forms
- Word & Excel to AEM Forms

Fixed Price Rates

Forms Development Services offers a fixed price/per surface - plus an hourly rate to address scripting and complex requirements - to cater to your organizational demands. 4Point can provide your organization with a budgetary number to get the project underway.
